VoLTE industry insights

- 650 million+ VoLTE subscriptions, expected to reach 5.5 billion in 2023 (Ericsson Mobility Report 2017)
- 127 live VoLTE networks in 63 countries on 1,218 devices (GSMA April 2018)

- Several IMS virtual deployments

- Most VoLTE service providers expanding with Wi-Fi calling and multi-device

- IoT voice

- Summary

VoLTE KPIs Maturity

MOS ≥ 3.5

Voice Quality

<200ms

HO Interruption

<225ms

Speech Delay

VoLTE

<1%

Drop Rate

$\geq 99\%$

Setup Success

<2,5-4s

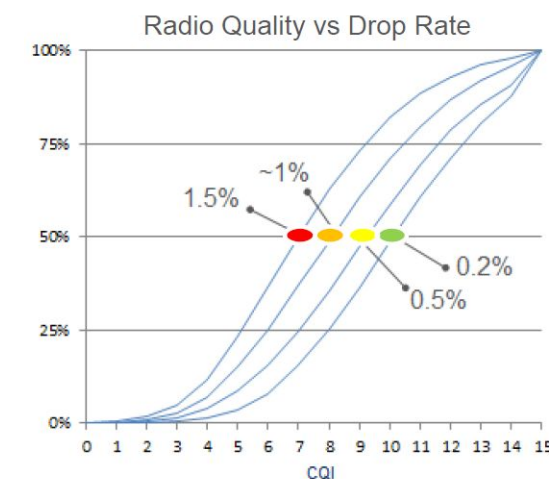

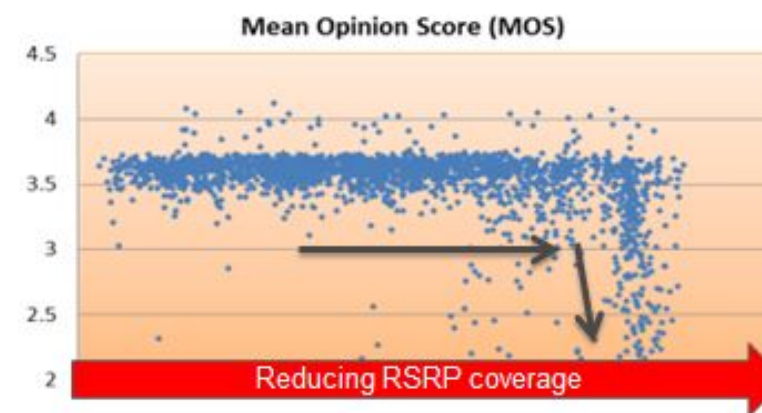

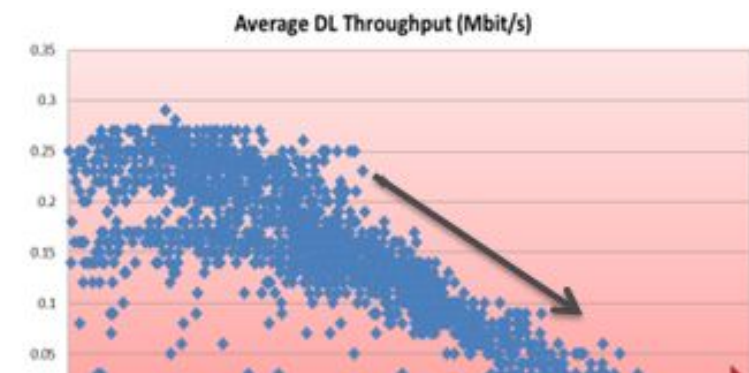

Call Setup Time

better or on par with
2G/3G voice KPIs

VoLTE network readiness

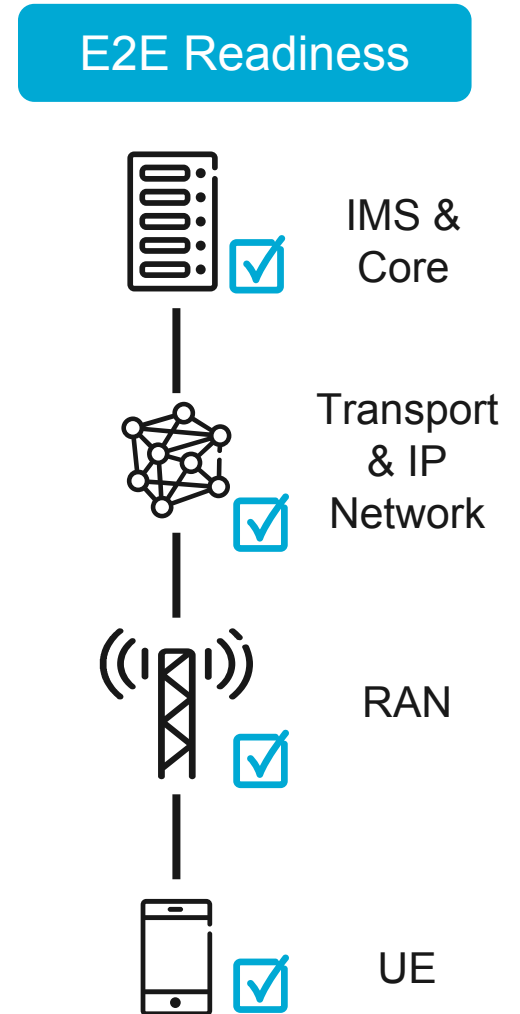

Different requirements compared to MBB:

- MBB high throughput, low mobility with short duration connections
- VoLTE: Low throughput, smaller packets, more mobility & longer duration calls (120+s)
- More sensitive to poor RF coverage/quality - effort to be focused on poor areas and cell edge

What to measure for VoLTE

- Voice is carried in data packets
- To monitor real user experience an E2E approach is needed
- Radio, Transport and Core KPIs needs to be monitored
- QoS is fundamental to achieve good user experience

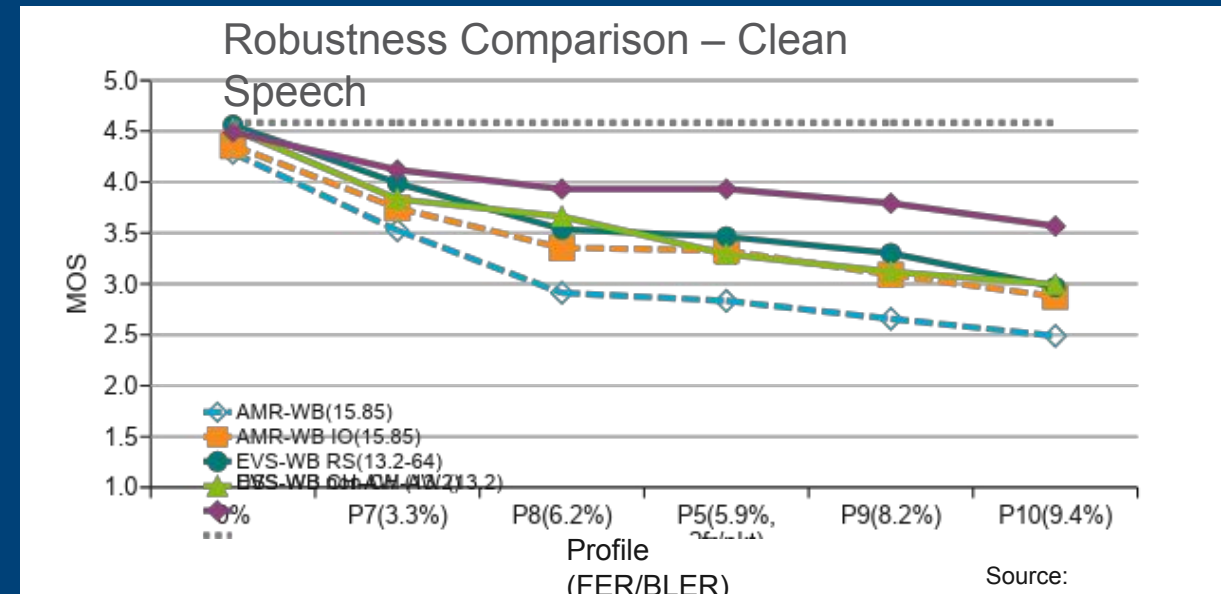

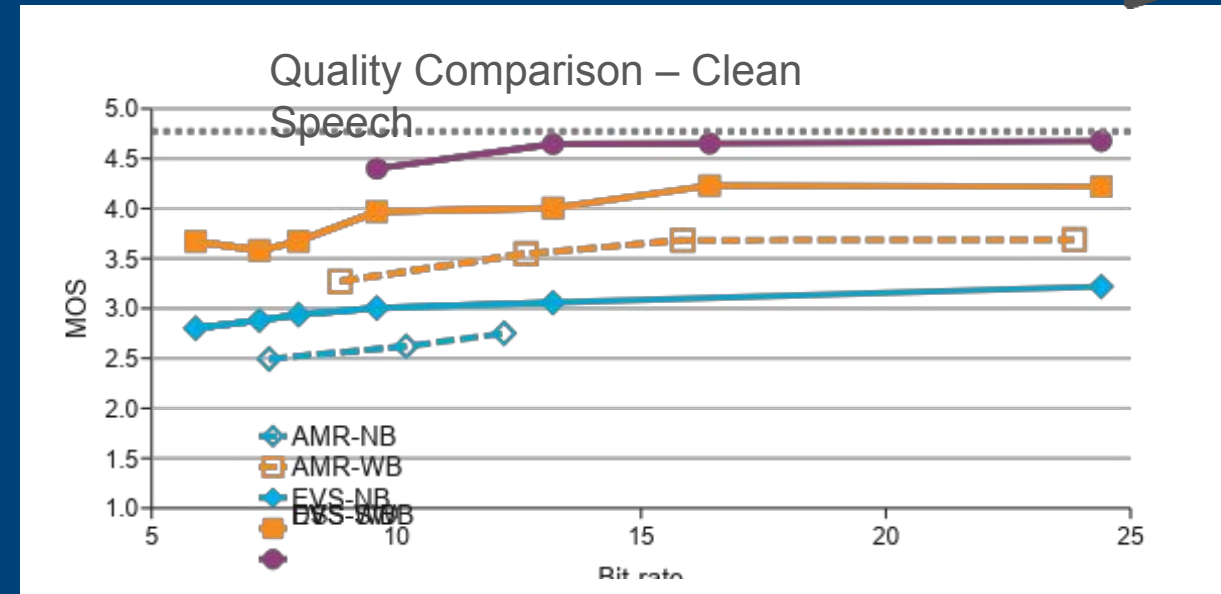

Content

- Market Trends
- VoLTE Performance
- Benefits and Use Cases
- Summary

Voice Quality beyond HD Voice with EVS

- Improved quality for narrowband and wideband
- Super wideband and Fullband audio voice quality
- Improved robustness – better quality at cell edge, areas with interference and for Voice over WiFi

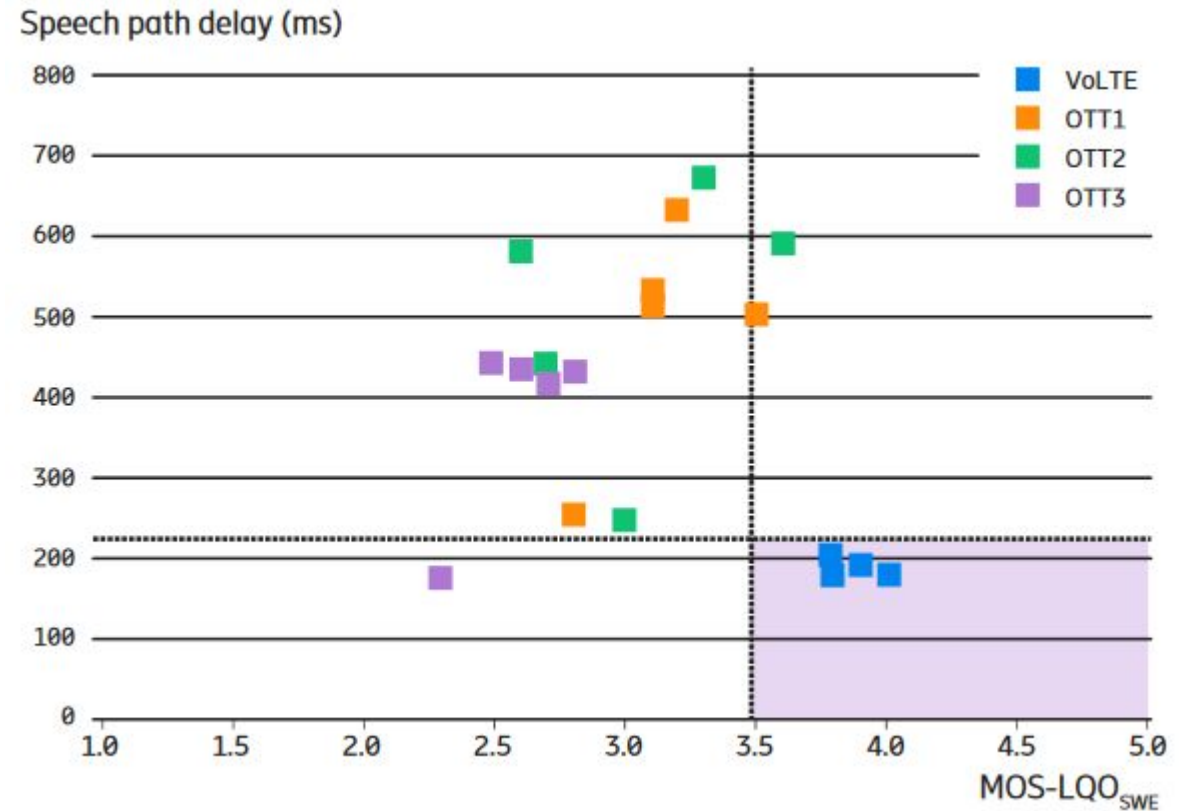

Superior communication experience

Difference between VoLTE and OTT voice

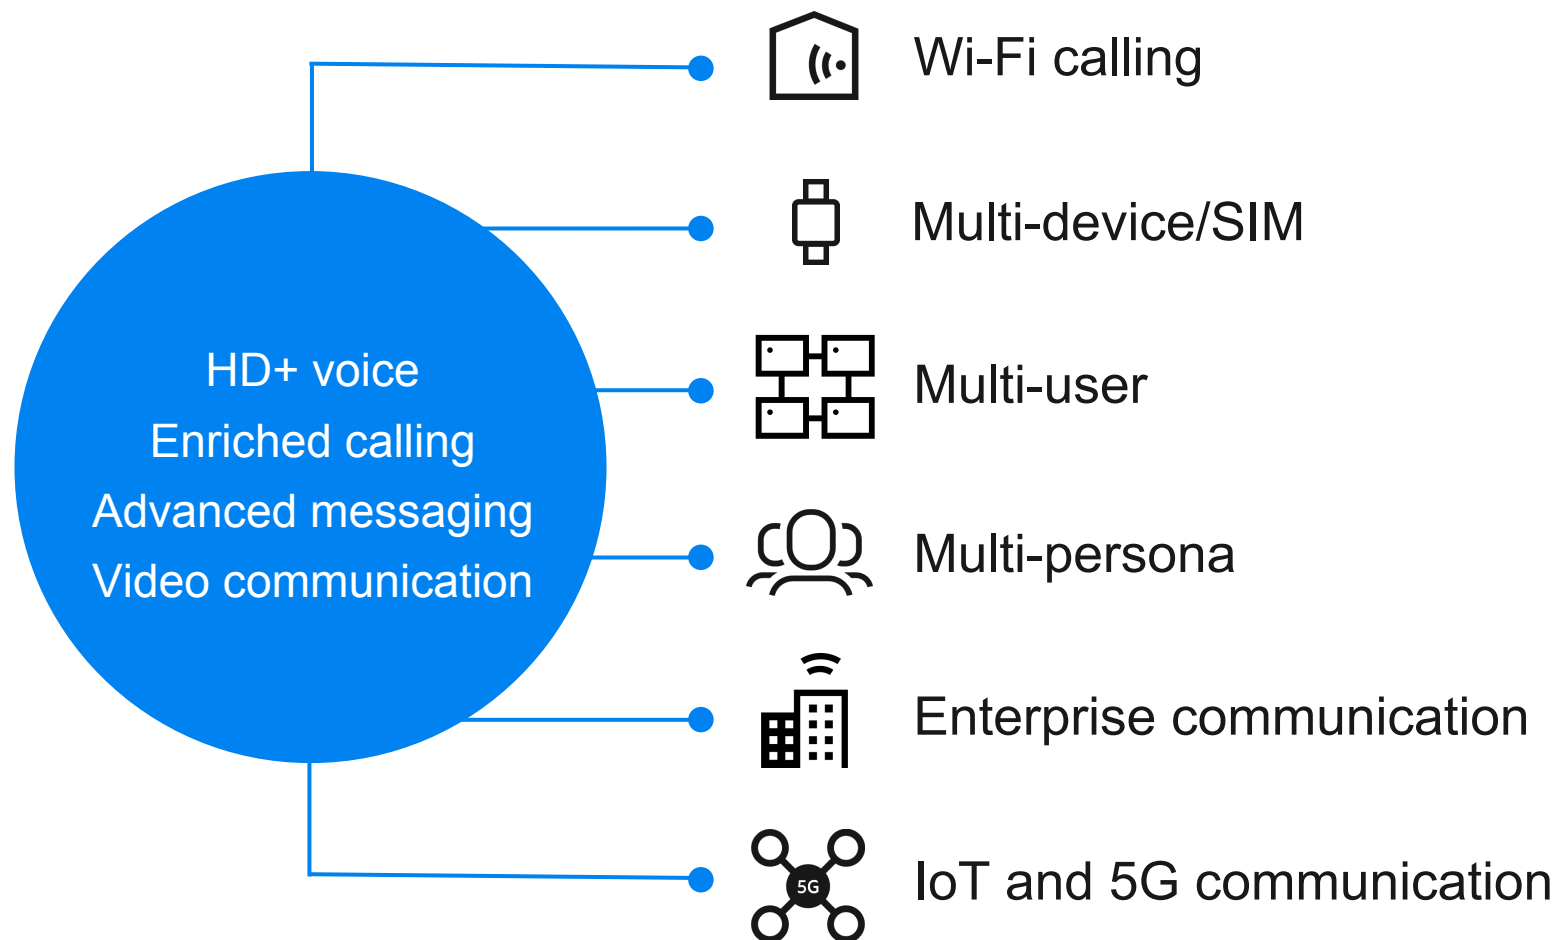

- VoLTE is delivered with telecom grade quality
- RAN uses scheduling and adaptation techniques to mitigate poor radio conditions
- OTT VoIP services run as best-effort data services

Tests performed in drive test in busy and non busy hours in South Korea

Additional Use Cases

Designed
to provide tomorrow's
advanced services

First to market
in collaboration
with device partners

Architected to quickly
launch offerings

Enriched Communications

Video Calling

- Support in majority of VoLTE smartphones
- Ease of use
- Communication continuity with HO to voice
- Live in close to 20 networks

RCS

- Enriched messaging, chat, file messaging, etc
- Users can, from the messaging app itself, engage with virtual assistants or chatbots to interact with business without having to download multiple apps.

Wi-fi calling market opportunity

Improve voice and video calling coverage

- Extend to areas with limited 3GPP access
- Utilize already deployed Wi-Fi

Wi-Fi calling solution

- 3GPP standardized
- Native device support from all major device vendors

90%
of our time spent
indoor

Only 40%
of users are satisfied
with cellular
coverage indoor

Wi-Fi calling
on smartphones

Wi-Fi calling for multi-device
on selected device brands

Use mobile phone number to call over any Wi-Fi

Multi-device/SIM one number on multiple devices

- Allow several devices to share the same number
- Answer calls in any device
- Transfer calls between devices

Multi-persona use case

Many numbers on the same subscription

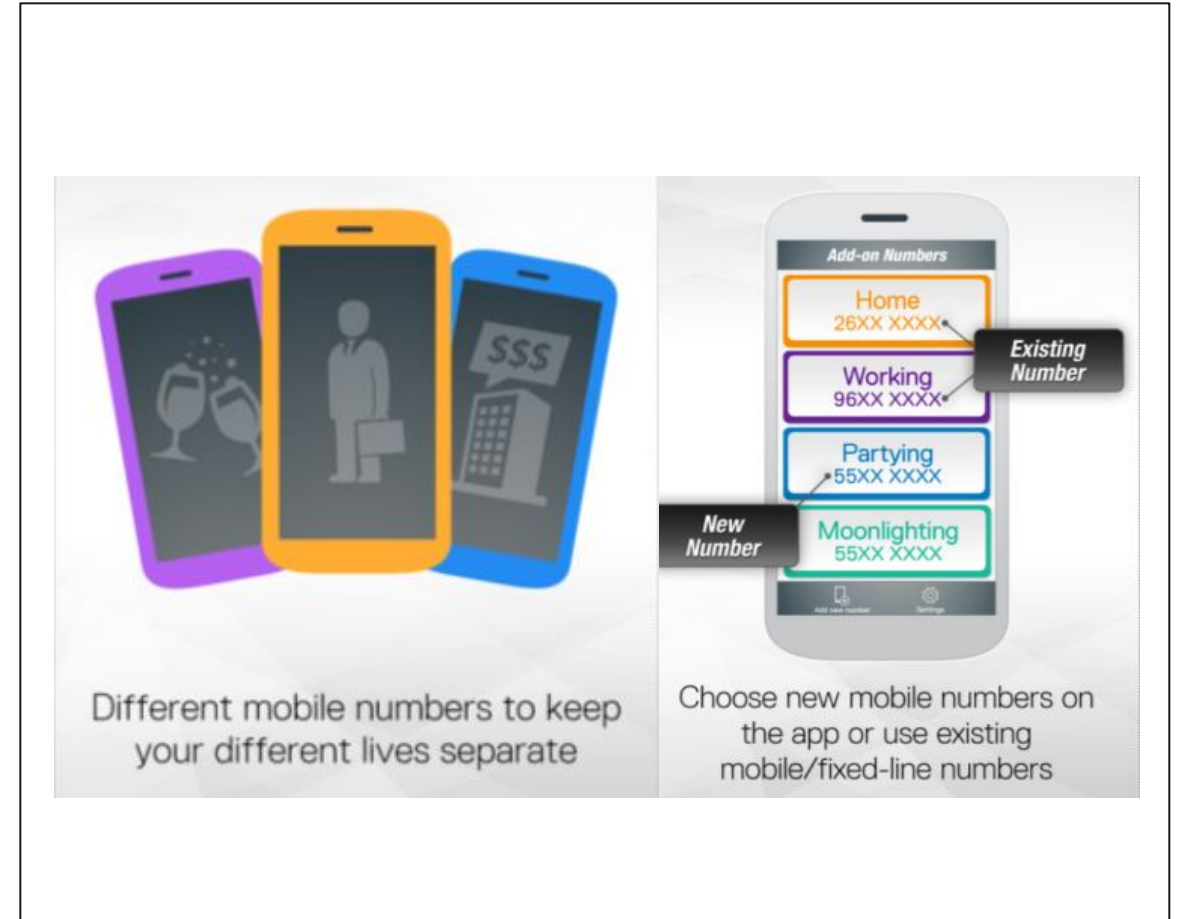

- Multi-persona settings and names
- Keep separate calling ID, message folders, phone book, voice mail

Persona selection

- Select which persona/dialer you want to use before you place the call: Private mobile, Work mobile, Private home, etc

Shown identity

- The receiving call party will only see the phone number you chose to call from

IoT voice call through VoLTE

Cat-M1

↓

Coverage

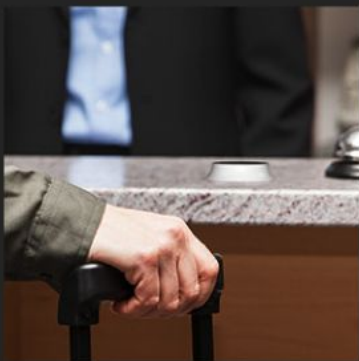

Battery life

Mobility

Voice

Why VoLTE over Cat-M1?

- Expand IoT use cases
- New vertical markets
- Leveraging existing infrastructure

● Taxi call at reception

● Vending machine

● Elevator panel

● Pet tracker

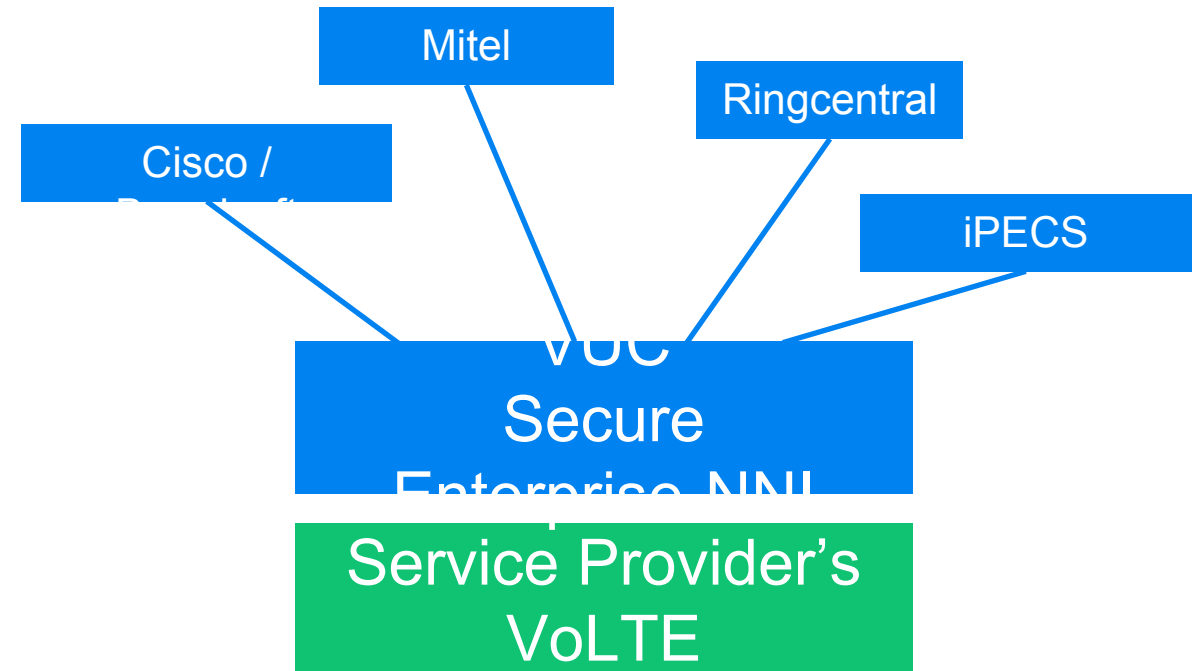

● Kid tracker

● Wearable for elderly

VoLTE for Unified Communication (VUC)

- Leverage on IMS core to integrate with enterprise applications
- Collaboration features
- Control and compliance for the enterprise
- Can be integrated with presence, rich collaboration and real time business applications (CRM, ERP, etc)

Roaming & interconnect

- Roaming and IP Interconnect happening, driving VoLTE take up and global expansion.

- VoLTE roaming live
- IP Interconnect live

- S8HR the dominant roaming standard currently being deployed. Built on EPC/data roaming.

IP Interconnect for VoLTE to VoLTE and for VoLTE to non-VoLTE terminals/networks

Live operations

- South Korea (2015)
- USA (2016)

5G and voice services

- Voice will continue to be offered alongside with new 5G specific services
- The 5G voice introduction starts with VoLTE as a base
- IMS continues as the voice service engine

Content

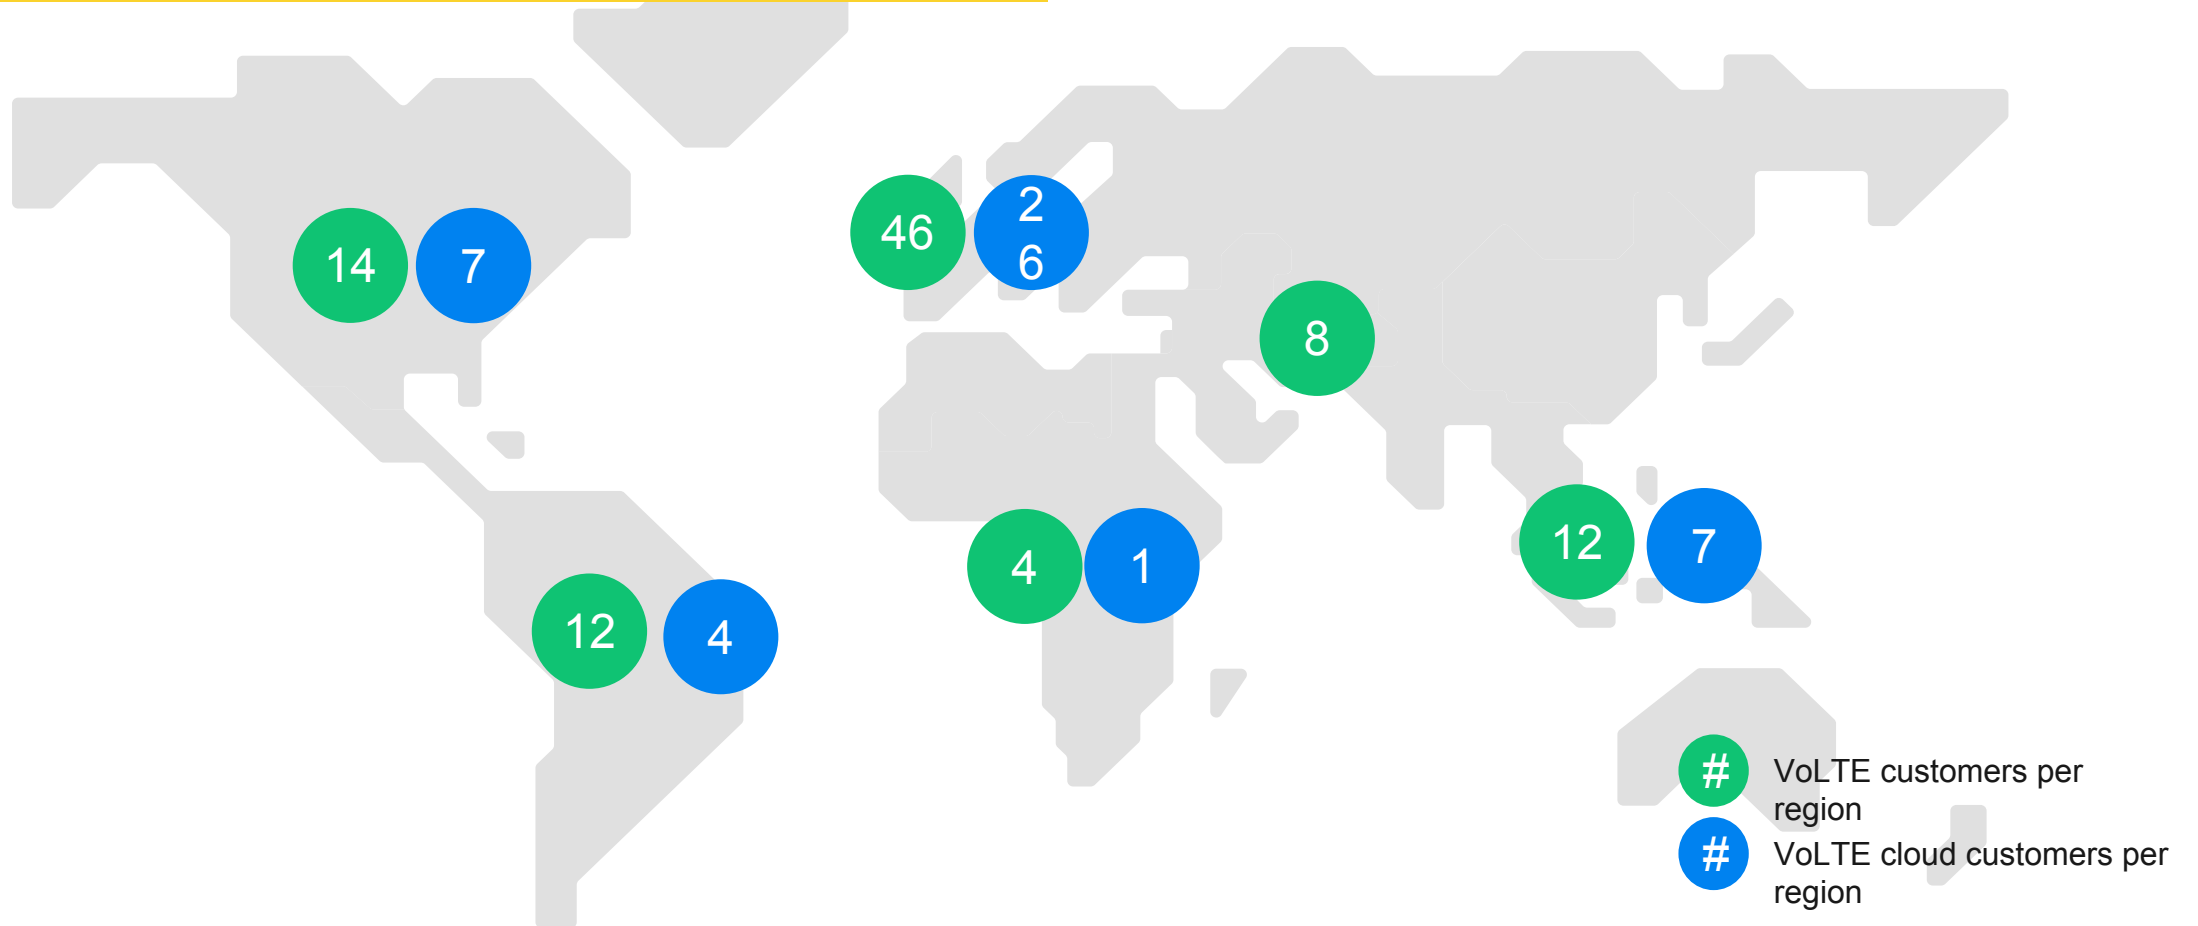

- Market Trends
- VoLTE Performance
- Benefits and Use Cases
- Summary

Ericsson VoLTE commercial networks

100+ VoLTE customers with 45+ live networks
50+ VoLTE cloud customers with 10 live networks

Key Takeaways

- Global, interoperable with unmatched voice quality
- Environment ready: LTE coverage and terminals availability
- Mature solution with additional opportunities
- VoLTE and IMS evolution to 5G
