Phone Theft

Consumer loss \$
Personal injury
Buying stolen goods
Insurance claims
Insurance fraud

Subscription Fraud

Operator loss \$

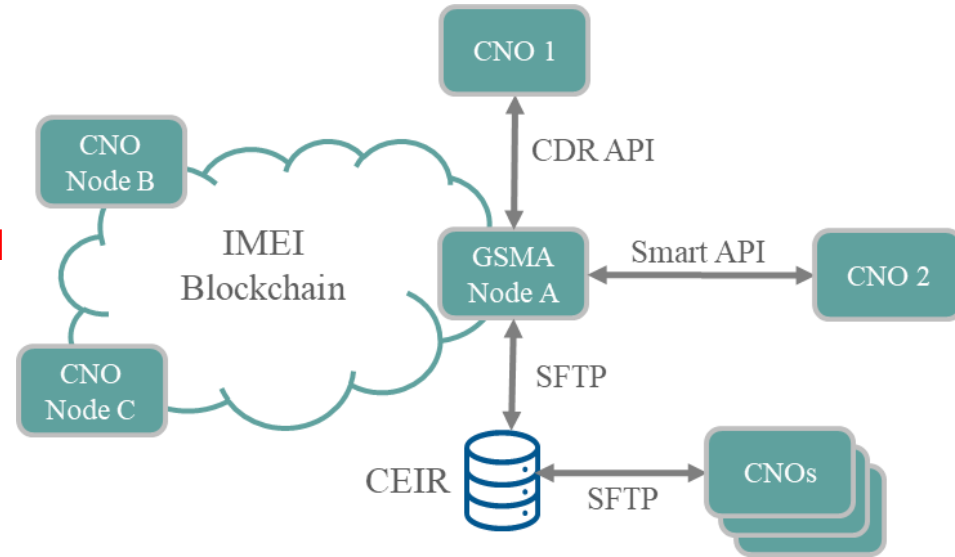

Robbery

Operator / Merchant loss \$
Personal Injury
Increase in insurance Premium

IMEI Blockchain Proof of Concept

- Test a basic architecture proposal for a private Blockchain that would support the goal of expanding participation in GSMA IMEI Blacklisting and improving the tools to combat theft and fraud of mobile devices and services.
- Participants to include current and prospective Contributor Network Operators
- Utilize one of two APIs to support integration with current system or use of periodic CDR file exchange

Blockchain Benefits

Highly secure

¹⁰ All transactions on a blockchain are cryptographically secured and provide integrity

Immutability

¹⁰ Once the data has been written into the blockchain, it is extremely difficult to change it

Transparency, trust and privacy

- Shared with everyone when made public
- Different levels of privacy
 - Permissioned consortium
 - Private Channels
 - Zero knowledge proofs

Data integrity

¹⁰ Eliminates device “ownership” changes by “bad” actors or “crooked” employees

Node participation by MNOs

¹⁰ The operators participating as blockchain nodes can take advantage relatively easy of additional use cases planned to be build on this blockchain

Use Cases Being Considered Beyond IMEI Blacklisting

- Advanced analytics
 - Cloned devices (duplicate IMEIs)
 - IMSI Swap/cloned
 - IoT
- IoT roaming and connectivity applications
- Spectrum sharing
- Subscriber KYC
- Other...

Women4Tech

GSMA is committed to reducing the gender gap of women in technology

Accelerating inclusion for women throughout all career stages through mentorship, sponsorship and board representation

GSMA Tech4Girls

Interactive and hands-on technology workshops for young school girls to expose them to robotics and coding and inspire careers in Science, Technology, Engineering and Arts and Design and Math (STEAM) studies
