Welcome and Overview 2015

27 July 2015
Introduction

- Welcome to CANTO
- Update on Digicel’s broadband projects
- Broadband investment and the impact of OTTs
- Legal & Regulatory framework for investment
Digicel Broadband – Where are we?

**Mobile**
- 4G data launched 2013-2014
- LTE services in a number of markets and looking to roll out

**Acquisitions**
- Anguilla, Bermuda
- Dominica, Jamaica
- St Kitts & Nevis, Turks & Caicos

**New rollout**
- Jamaica, Trinidad, Monserrat, Barbados (possible acquisition of divested assets)
- Hoping to rollout in other markets
SAT – Post Acquisition

- US$15m investment since acquisition through March 2015
  - 32,500 household passed for high speed broadband.
  - US$5m lined up in 2015 for further improvements.
  - Brand new all digital TV platform - features such as Programme Guide, DVR, Video on Demand, Catch up TV & Multi-screen capabilities
  - Citizens now have access to world class TV with legal content

- Employment generation
  - 20 additional permanent staff Indirect employment generated for more than 130 Dominicans

- Increased broadband competitiveness and market transparency
  - 4x speed at the same market price as competition thereby enabling more people to access next gen broadband
  - No setup, connection or installation fees charged removing all barriers to connectivity and reducing costs to consumers
  - No unnecessary charges such as fixed line rental without usage of a fixed line

We want to invest but need the right regulatory environment
The OTT Challenge

- Voice OTTs raise key concerns under existing telecommunications framework

- The combination of:
  - mobile broadband access
  - smartphones
  - internet technology

- has led to the emergence of a new breed of consumer mobile voice and messaging communication services provided by internet-based companies, often referred to as over-the-top service providers (OTTs)

  - Viber: a startup in 2010 to over 680 million users by June 2015.
  - WhatsApp: over 800 million users + adding 100 user million every six months.
  - The combined Facebook/WhatsApp conglomerate currently has over 2 billion users of its services.
4 Key Problems

- Law is applied unevenly
  - Telecommunications Acts: A licence is required to offer voice services
  - Unfair competitive advantage: OTT not subject to the same regulatory requirements, pay no taxes, licence fees etc.

- National Governments
  - Government revenues decrease as licensed operators lose market share
  - Organized crime: legal interception is not possible
4 Key Problems

- Consumer rights
  - Data Protection
  - Consumer law protections
  - Calls to emergency services
  - Cyberbullying, malicious calling, scams

- Impact on Operators
  - In Europe predicted: Voice & SMS revenues will decline by 30% & 40% by 2017
  - Data revenues will not make up the difference: overall revenues will decrease by approx. 25%
  - India - 50% of operators voice and SMS revenues will be lost to OTT (Credit Suisse)
  - Caribbean problem: incoming international calls
  - Investment needed: faster mobile networks for the Internet of Things
Securing Investment in Broadband

“Everybody knows today that with telecom service providers and OTT [players], there are unbalanced relations and we have to find a better balance,” ... “Financing of broadband networks is crucial”.

- Andrus Ansip, EU Digital Single Market Commissioner

- European Commission is working on a review of the existing EU regulatory framework which would focus on encouraging investment in infrastructure.

- Legislative proposals to reform the current EU telecoms rules in 2016 – may apply the regulatory framework to OTTs.
What is Required?

- Transparent evidence based regulation
  - EU review ongoing
  - TRAI in India
  - TRA Bahrain
  - TATT in Trinidad & Tobago

- To incentivize investment in Broadband
  - “Same rules for the same service” – The regulatory framework must apply equally
  - Internet conglomerates must contribute towards network costs: investing in local economies
  - A fair commercial solution is required – unfair contracts not acceptable
Disincentives: “Net Neutrality”

"a solution that won’t work to a problem that simply doesn’t exist”

- Mr. Ajit Pai, FCC Commissioner

- US rules suit US based content providers - “The most effective cartel is one that the government itself supervises for its members by force of law.” – Prof. Sidak

- EU: Net Neutrality a disincentive to investment - allow Operators prioritize certain services for optimum use of networks

- Caribbean - current policy must aim at boosting penetration which gives people access: commercial freedom is important

- Crucial issue – separate from OTT discussion
Conclusions

- Priority must be increasing broadband penetration

- “Same rules for the same services” – OTTs must be within the regulatory framework

- The reality of OTTs must be recognized – the internet is not a “free for all”

- Prioritize Investment - transparent evidence based approach to regulation is required

- Solutions that are appropriate for the Caribbean are required
